

Fixed Wirewound Enamelled Corrugated Tape Resistors Very High Dissipation

FEATURES

- 160 Watt to 1kW at 25°C

The remarkable dissipation power of this series is the result of an original winding method using corrugated edge-wound tape, thus forming a very active radiator. The enamelling follows the contour of the resistive element and provides effective insulation and support for the winding.

The tubular core is of special ceramic, capable of withstanding high thermal shock and overload of short duration.

RECOMMENDATIONS FOR USE

OVERLOAD:

The RSO resistors are capable of withstanding overloads of about 10Pr for a maximum period of 5 seconds; they can resist momentarily even greater overloads.

The following table shows the admissible load K x Pr in Watts.

CYCLE PERIOD (LOAD + BREAK)	15s	30s	60s	120s	K
Overload period in seconds	2	4	7	9	6
	2.5	5	9	12	5
	3	6	12	15	4
	4	8	16	23	3
	5	10	20	30	2
